DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-2 and 4-5 are rejected under 35 U.S.C. 102(e) as being anticipated by **Saints et al. (6,075,974)**.

Regarding claims 1 and 2, Saints discloses a method of transmitting over a wireless link, comprising adjusting the transmit power of a wireless transmitter in relation to a number N of expected ACKs for radio transmissions over the wireless link by monitoring the number of ACKs lost for radio packets transmitted, increasing the transmit power if the number of ACKs lost/expected number of ACKs is above a first threshold, and decreasing the transmit power if the number of ACKs lost/expected number of ACKs is below a second threshold (mobile station determining three

- unexecuted power control messages (corresponding to a +3 dB increase), and adjusting its power level threshold by a corresponding -3 dB ..., see Figs. 3A-3H, 4 and col. 5, line 60 through to col. 8, line 18).

Regarding claims 4-5, Saints, Fig. 2B and 3A shows the provision of a base station and a wireless unit for transmitting acknowledgments of radio packets transmitted over the wireless link (see col. 7, lines 1-48).

3. Claims 1 and 3 are rejected under 35 U.S.C. 102(e) as being anticipated by **Mochizuki (EP 0 917 304)**.

Regarding claim 1, Mochizuki discloses a method of transmitting over a wireless link, the method comprising: adjusting the transmit power of a wireless transmitter in relation to a number N of expected ACKs for radio transmission over the wireless link (see Fig. 3, steps 104-107, col. 5, lines 5-46).

Regarding claim 3, Mochizuki further discloses determining an initial transmit power for the wireless transmitter based on a measurement of a signal over the wireless link (see col. 5, lines 10-18).

Allowable Subject Matter

4. Claims 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Vembu (6,259,928) discloses a system and method for optimized power control.

Bucher (5,621,737) discloses a communication system with link margin control through bit error rate estimation for controlling transmit power level.

Sayed et al. (5,828,677) a method for performing adaptive hybrid ARQ.
